AWWA Announces Webcast on Implementing Low-Pressure Membrane Plants - The Utility Perspective

(DENVER, CO) – On Wednesday, August 11, the American Water Works Association (AWWA) will host a webcast titled “Implementing Low-Pressure Membrane Plants - The Utility Perspective.” The webcast will review critical steps in membrane plant design, pre-procurement, and construction.

An increasing number of utilities are considering employing membrane technology, so this detail-oriented webcast will review specific aspects of membrane treatment plant design, identify important construction considerations, and provide lessons learned from individuals already operating membrane treatment plants.

Webcast presenters include:

- Andrew Farr, Manager Treatment Capital, Region of Peel, Ontario, Canada
- Robert Michaelson, Water Systems Manager, Manitowoc Public Utilities, WI
- Gary Witcher, Manager of Water Treatment, California Water Service Co., CA

For more information on webcasts and registration details, go to www.awwa.org/Education/webcasts.

###

AWWA is the authoritative resource for knowledge, information, and advocacy to improve the quality and supply of water in North America and beyond. AWWA is the largest organization of water professionals in the world. AWWA advances public health, safety and welfare by uniting the efforts of the full spectrum of the entire water community. Through our collective strength we become better stewards of water for the greatest good of the people and the environment.
